

TREND

HIGH END FINISHES

TREND

TREND is the range of finishes designed by Giesse to accessorize modern windows designed with a steel and varnished wood finish.

Beautiful

A modern, high-end design offering the best finishes to match the modern surface treatments of aluminium profiles.

Constant over time

Giesse has always sought quality raw materials and performed highly protective surface treatments. The attention that Giesse reserves for the materials has allowed us to create the TREND finishes with the highest level of quality aesthetics.

High corrosion resistance

Over 240 hours of resistance to exposure to salt spray in accordance with EN 1670 (Class 4) corrosion testing.

Best surface treatment

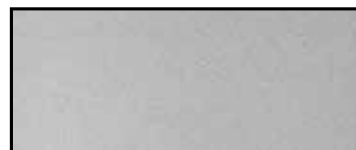

Each product is subjected to the best possible surface treatment, thus ensuring maximum protection in accordance with the industry's performance standards. This is with the aim of safeguarding perfect maintenance for the components in view, such as hinges, cremone handles, window handles and door handles.

Wide product range

Giesse applies TREND finishes on the main products in the range, ensuring a uniform finish and durability, irrespective of the original raw material.

Giesse constantly expands its product range also by offering a complete range of high-end finishes to significantly increase the added value of the casement and of the window-maker with the certainty of offering 100% Giesse hardware, with quality products and finishes.
